**(54) MEMBER FOR SLIDING PART**

**(57)Abstract:**

**PURPOSE:** To obtain a member for sliding parts having a high PV value even under lubrication with an aqueous liquid, and improved abrasive resistance, by press molding a mixture of fluororesin powder, asbestos fibers, carbon fibers, and carbon powder or granules, and by calcining the molded article.

**CONSTITUTION:** (A) Fluororesin powder is mixed with (B) preferably 2W25wt.% of asbestos fibers, (C) 2W25wt.% of carbon fibers, and (D) 2W70wt.% of carbon powder or granules. The mixture thus obtained is press molded and calcined. If the content of (B),(C) and (D) is <2wt.% respectively, the effect is lowered. If the content of any one of (B) and (C) is >25wt.% or that of (D) is >70wt.%, molding is difficult and the article is easily broken.
